## DETAILED ACTION

### *Examiner's Statement of reason of Allowance*

1. **Claims 2-5 are allowed.**
2. **The following is an examiner's statement of reasons for allowance:**

The present invention is directed to a method of anonymously signing a message by a member of a group.

The Prior art made record fails to anticipated or make the claimed invention. Specifically, the prior arts fail to teach, in combination with the remaining elements, a method of anonymously signing a message by a member of a group including ten steps; *wherein during the tenth step, calculating an additional signature of a combination comprising the message and the anonymous signature using up-to-date common private key of the signing member; during the eight step, the common private key stored in the storage means of the signing member is updated if the updated date in the storage means of the signing member is also different from the updated date of the up-to-date common private key updated by the first calculation mean; during the third step calculating and identifier of the member for each member; calculating an identifier for each new member of the group on each revocation within the group; and on each modification of the composition of the group that corresponds to a revocation within the group, eliminating*

Art Unit: 2437

*the secret key of a revoked member from the storage means connected to the first calculation means of the trusted authority, or similarly, in dependent claims 2, 3, and 5;*

The closest prior art, as previously recited, Camenisch, “*Group Signature Schemes and Payment Systems Based on the Discrete Logarithm Problem*,” Doctor of Technical Science Degree Thesis, Swiss Federal Institute of Technology Zurich, 1998, and in view of Inada, U.S. Patent No. 6,986,044, filed on August 31, 1999, and further in view of Kim et al., “*Efficient and Secure Member Deletion in Group Signature Schemes*,” D. Won (Ed): ICISC 2000, LNCS 2015, pp. 150- 160, Springer-Verlag Berlin Heidelberg, 2001., are also generally directed to various aspects of anonymous signature. However, none of Camenisch, Inada, and Kim teaches or suggests, alone or in combination, the particular combination of steps or elements as recited in the independent claims, claims 2, 3, and 5. For example, none of the cited prior art teaches or suggest the *during the tenth step, calculating an additional signature of a combination comprising the message and the anonymous signature using up-to-date common private key of the signing member; during the eight step, the common private key stored in the storage means of the signing member is updated if the updated date in the storage means of the signing member is also different from the updated date of the up-to-date common private key updated by the first calculation mean; during the third step calculating and identifier of the member for each member; calculating an identifier for each new member of the group on each revocation within the group; and on each modification of the composition of the group that corresponds to a revocation within the group, eliminating the secret key*

Art Unit: 2437

*of a revoked member from the storage means connected to the first calculation means of the trusted authority.* Therefore the claims are allowable over the cited prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
